

Reopen Old Tres de Mayo Mine In the Patagonias

Much Development Work Being Done In El Paso and Other Mines.

Patagonia, Ariz., March 28.—The Tres de Mayo property, an old Spanish mine in the Patagonia mountains, ten miles south of this point, is being reopened by O. R. Bachman, who is taking high grade silver lead ore from an 18-inch ledge at the depth of 135 feet. Some ore is being shipped to the American Smelter and Refining Co. at \$400 a ton.

A lease on the American Smelter and Refining Co. has been taken by Gross & Kennedy of Duluth, from Clarke & Peterson of this district. The lease calls for the opening of the mine and the property, installation of modern machinery and sinking of a 200 foot shaft.

The Duquesne Mining and Reduction company is filling in the time of low copper value by starting on an extensive development campaign, designed to block out ore for shipment or for possible reduction in a mill of its own.

The El Paso mine at Mowry, now under the management of W. J. Mitchell, has its main shaft about 400 feet down, extracting about 250 tons of ore already has been developed. The company has a lease on the old El Paso mine, which also has 300 feet of shaft.

Drilling on the 250 level of the old Mowry mine has found a new body of ore. A small experimental mill is being run by the property's main stockholder, A. J. Hamilton of Warren, Pa. A manganese lease on the Mowry is being worked by Shaw & Daughes of Patagonia.

Several new ore chutes have been opened up at depth in the Tres de Mayo mine.

Shipments of manganese are being made from the Tres de Mayo property, near the Pierce-Gardner workings. The morning of March 28, the first shipment of manganese was made and will send out 500 tons a month.

Engineers To Assess Losses Of The Miners Of War Time Minerals

The committee appointed by the federal bureau of mines of the interior department to administer the war minerals relief act, has been working on a report on mines which produced chrome, manganese, pyrites and minerals, the committee also has been working on the government, under this law, engineers who have the requisite training and experience will be paid from \$300 to \$400 per month, assistant engineers, \$250 to \$350 a month.

Drilling work will be largely by means of which the committee will arrive at the amount of loss producers of these four minerals sustained during the war. The committee is also working to produce at the request or command of agencies of the government for war purposes.

WILL RESUME WORK.

President J. O. Hamilton of the King & Queen Mine Co. has been quoted as saying that work will be started very soon on that concern's mine, of which the company has a lease in the Patagonia mountains. A core drilling equipment will be installed, it is said, to prospect the mine.

CAPT. KIMBER WAS READY TO DIE OF CONSUMPTION

Doctors Told Him So, But He Is Gaining Strength and Health—Tells How.

"My case of tuberculosis was an advanced one of over five years' standing. Was in a tuberculosis hospital for over a year, and returned home worse than when I went. I had to give up a good position in New York City and move up into the Catskill mountains on the advice of my doctor. The doctors said I was ready to die a year ago. I was so weak I could hardly stand up."

I began taking Milks Emulsion last October. I have now taken 12 large bottles and my weight has increased 25 pounds. I am now able to walk to the village three miles and back, and chop a little wood every day.

I used to fill a canteen box once a day and my cough was so bad that I do not raise enough to fill a canteen box in a week. I do not cough any more during the day, only when I get up at night.

"When I first began taking Milks Emulsion, for some time after that I couldn't take a deep breath without coughing. Now I can take in deep breaths without any coughing. I have been practically free from coughing since I began taking Milks Emulsion. I have been practically free from coughing since I began taking Milks Emulsion. I have been practically free from coughing since I began taking Milks Emulsion."

I have been treated by thirteen different doctors and had spent all my money trying to find a cure. The doctors all told me that there was no medicine that would cure me. I was very skeptical about trying even the first bottle of Milks Emulsion. But I was persuaded by a friend who told me of two positive cures it had effected in her own family.

Thank God I tried it. I began to feel a beneficial effect only two hours after I started taking it. I am convinced it is the best medicine I have ever used. It is so good that I am steadily improving. The advanced stage of my disease had arrived before I heard of Milks Emulsion and this is making my recovery slower than I had started taking it a few years sooner.—Capt. E. R. Kimber, Dunton Lodge, Cairo, N. Y.

Capt. Kimber wrote this letter Aug. 1, 1918, to the manufacturer of Milks Emulsion, who is now in the strength and health through the use of this food medicine has been duplicated in hundreds of other advanced cases. Under the maker's guarantee every sufferer is welcome to try it without risking a cent.

Milks Emulsion is a pleasant, nutritive food and a corrective medicine. It restores healthy, natural bowel action, doing away with all kinds of pain and phlegm. It promotes appetite and quickly builds the digestive organs in the case of indigestion. As a builder of flesh and strength, Milks Emulsion is strongly recommended to run-down, nervous people, and it has produced marvelous results in many cases, because of the lungs. Chronic cough, trouble and consumption are promptly relieved usually in one week.

This is the only cod liver oil emulsion, and so palatable that it is eaten with a spoon like ice cream. A truly wonderful medicine for weak, sickly children.

No matter how severe your case, you are urged to try Milks Emulsion under this guarantee—Take six bottles with you, use it according to directions and if not satisfied with the results, your money will be promptly refunded. Price 45c and \$1.50 per bottle. The Milks Emulsion Co., Terre Haute, Ind. Sold and guaranteed by all druggists.—Adv.

Silver Mining Revives With Copper Slump

Companies In The Tucson District Turn To The White Metal.

Tucson, Ariz., March 28.—The temporary slump in copper has caused renewed interest in silver all over Arizona, but especially in the mines of this section. The silver capping ores of several of the properties south of Tucson are being taken out in large quantities, while about 25 small properties in the Silver Bell section, deprived of a market at \$200 a ton by the closing of the smelter, are shipping silver ores to El Paso. The Empire Zinc company is to start work again on its silver-zinc deposits.

Near Silver Bell, where there is the development of an ore body that carries good values in gold and silver, in addition to a large amount of copper. Silver has been found in the Beach mines in Babouquivari district, where a small mine, owned by the manager Jas. M. Douglas. The corporation has 40 claims, and has placed on the dumps about 25,000 tons of ore to be taken out by a small mill in gold, silver and copper.

At Continental, the Great Western Mining Co. is sinking a new shaft and is shipping copper ore to Douglas. The power house is being modernized for heavy work ahead. The adjoining Leadville property is being reopened by its owner, Wm. Holmes, who will ship several car loads a day to Douglas. From one body already blocked out. The district is fairly active, due to the work of local men.

Only leather operations are known in the Tucson district, where the Shannon company's copper belt property and capital Metrick's Tajo mine otherwise have been closed. At Johnson camp practically all work has been stopped, as little is being done save in a leaching way.

The Burns Flint Grant Mining company has been incorporated at Tucson by A. J. Grund, to operate mining properties in Santa Cruz county acquired from the Boulding and Haller interests of Tucson.

Hackberry Mill In Arizona Starts Work With Rich Production

Kingman, Ariz., March 28.—The new Hackberry mill in the camp of the same name, on the Santa Fe main line, 25 miles northwest of Kingman, has started work on a large scale. The initial extraction of 15 percent of the sampled value of the ore. The oil of the Hackberry mine is a rich one, yielding 200 ounces silver and some gold, while the tailings concentrate run 200 ounces silver. The plant has a capacity of 200 tons of ore a day and is expected to turn out a monthly product valued at \$125,000. The plant has been under construction for nine months. It is considered one of the best in the southwest, with ore of high grade, containing a minimum of expense. Crushing is by ball mills.

Power is transmitted to the mine and mill electrically, from a three unit oil burning plant nearby. The principal stockholders, Jas. Holmes of Santa Lake and James Murray of Butte, witnessed the starting of the machinery and expressed satisfaction over the fine show. The mine work has been under William Neagle and has blocked out enough ore for two years of mill operation. Location of the property dates back to 1874, when the two mile ledge was found and staked by W. R. Alderson of Grand Central.

The Rico Exploration company, under the management of M. C. Cleveland, has taken out, from drifting operations, a 40 ton car load for the Humboldt smelter that samples 7.55 ounces gold and 268 ounces silver, or about \$450 a ton. Concentrating is planned at a greater depth, with expectation of finding other veins. Located on the property are the same general strike.

George Hill, manager of the Walden property, states that his company now is financially equipped for development work which is to be started by drifting on the 600 level to the southeast.

W. W. Lewis has incorporated the Silver Bell Exploration company, to develop claims on the Hackberry ledge. The property, about 25 miles northwest of Kingman, is a rich one, yielding 200 ounces silver and some gold, while the tailings concentrate run 200 ounces silver. The plant has a capacity of 200 tons of ore a day and is expected to turn out a monthly product valued at \$125,000. The plant has been under construction for nine months. It is considered one of the best in the southwest, with ore of high grade, containing a minimum of expense. Crushing is by ball mills.

At a late meeting in Kingman the New Comstock Mining company's capital was increased to \$100,000 to provide funds for further development of the Catherine mine, in the Blue Ridge range, west of Kingman.

GOLD MINING INTEREST FAVORED BY TAX LAW

That financial and business authorities, the Boston News Bureau has to say of the matter of war and excess profit taxes and income taxes as such apply to the mining of gold, as follows: "Attention is called to section 294 (b) relating to war and excess profit taxes, but not to income tax, which reads as follows: (c) In the case of any corporation engaged in the mining of gold the portion of the net income derived from the mining of gold shall be exempt from the tax imposed by this title and the tax on the remaining portion of the net income shall be the proportion of the tax computed without the benefit of the subdivision which retaining portion of the net income bears to the entire net income."

EMPRESS COPPER COMPANY SHUTS DOWN ITS MINE

J. P. Hutchinson, who up to 12 years ago was a well known mining man in this section, has been closed down about three months ago and is in charge of a ranchman's estate in the town of Copper and the uncertain price of that metal.

TO DEVELOP VOLCANO MINE

A report from Silver Bell, N. M., is to the effect that Frank H. Higgins, of Tucson, Ariz., who recently bought a lease on the volcano mine, north of that place, from Charles Smith, has been working on the mine. The property for operation is said to be about 10 miles from Silver Bell. The property is said to be about 10 miles from Silver Bell. The property is said to be about 10 miles from Silver Bell.

DEVELOP KING MINE

The King Copper Mining company, developing copper properties on the east slope of the Chiricahua mountains, eight miles from Rodeo, N. M., in a recent statement, said that it has been doing development work for 18 months and had two double compartment shafts, one 200 feet and the other 250 feet, and was installing new boilers at the Silver Bell shaft, preparing to sink it to 700 feet. Current drilling program work of part of the property this year is part of the plans of development.

One Mine That Goes Forward As A Producer

The Lluvia de Oro Mine In Western Chihuahua Unaffected By Wars.

The Lluvia de Oro Mining Co., operating the rich Lluvia de Oro gold mine, in extreme western Chihuahua, Mex., southwest of Batopilas, has been operating with practically no interruption for the past three years. A. L. Underwood is general manager. This company has a 12 stamp mill and the cyanide process is used in treating the tailings.

The influenza epidemic hampered operations and the deaths were about 25 among the employees, according to reports from that camp. This property, which is one of the richest gold mines of Mexico, has been producing 500 to 600 ounces of gold a month. It is a gold and silver mine and all its transportation is from the west at San Blas station, on the Southern Pacific railroad of Mexico. In the state of Sonora, from San Blas the little branch road formerly the Kansas City, Mexico & Orient, runs up the Sierra Madre to Chihuahua. As a prospect, this mine sold for \$2,500,000.

ARIZONA COMPANY MAY BUY SHANNON PROPERTY

It is reliably stated that negotiations have been on, at least in a tentative way, between the Arizona Copper Co. and the Shannon Copper Co., by which the former may buy the properties of the latter. The Shannon company has a large acreage of copper ground at Chifton, Mexico, and is a subsidiary of the Arizona Copper Co. The Shannon mines and smelter have been closed down since the middle of last year. It was bought with \$1,000,000 of stock, and has been shut down since the middle of last year. It was bought with \$1,000,000 of stock, and has been shut down since the middle of last year.

CHICAGO MEN VISIT EL PASO PROPERTIES

According to news from Guadalupe, Mex., J. O. Cooper brought down to El Paso recently a considerable number of prospective investors from Chicago and took them out to the El Favor mining company properties, some 20 miles from that city. The party was in Mexico City, the newspapers published pictures of them as exploring the mines and smelter and treated their coming as a sign of returning confidence in Mexico.

SEVERAL COPPER MINES IN AUSTRALIA CLOSED

Melbourne, Australia, March 28.—Owing to the absence of profitable overseas markets, several Australian copper mines have been shut down, it was announced today. This condition is considered transitory and likely to pass when the accumulated war stocks of the metal have been consumed. Meanwhile, however, a large number of workers have been thrown out of employment.

NACONARI PUSHES WORK

The Nacozari Consolidated company is pushing development work on property in the Nacozari district of Sonora, Mexico, and early in March, according to Charles E. Smith, here in El Paso several days on business connected with his corporation's affairs at the local smelter and with other matters.

REBUILD BENSON SMELTER

Phoenix, Ariz., March 28.—The old Benson smelter at Benson which is being rebuilt will be ready for operation about the first of April. The smelter, which is in charge of Benson, who is in charge of the work and who was in Phoenix Friday.

What Would You Do if You Had a Chance Like This?

Practically Surrounded by Holdings of Texas Company

Sun Company, Humble Oil and Refining Company, Gulf Production Company, Magnolia Petroleum Co.

If a fellow would walk up to YOU some day, and say: Here, Friend, is a thousand dollars for you. You didn't really work for it, but it's yours, so take it. That would be fine, eh? Sure it would. Yet such an event is absolutely possible, and it is possible that you can have such an experience. Read this carefully.

What we all want is to make money, to lay up a nice sum of money for the rainy day, so we all can spend our declining days in comfort, in good health, and most of all, that we shall be independent of others.

While we are in the best health, while our earning power is at the greatest from a physical standpoint, we can better afford to take advantage of opportunities. We can afford to do what John D. Rockefeller, Andrew Carnegie and all the rest of the money folks have done—take a chance on making big money.

So, here's YOUR OPPORTUNITY. Do you want to take a chance on making big money? All right, then, read this: The Breckenridge Oil Corporation, INCORPORATED under the stringent laws of the State of Texas, has been organized with a capital of \$120,000.00, shares \$1.00 each, par value, for the purpose of making money out of oil in the wonder Texas oil fields. We own a lease on 30 acres in the famous Ranger, Texas, field, in Stephens county, in the heart of this tremendously wonderful field.

Our lease is approximately one mile from the C. H. Houston well which is producing 150 barrels of oil a day and yet it is only on the top of the sand. When drilled in it is expected to make around 2,000 to 3,000 barrels a day.

Our lease is approximately 2 1/2 miles from the famous Billingsley well that is producing 2,000 barrels a day and it is only 17 feet in the oil sand.

Our lease is approximately 3 1/2 miles from the Stoker well that came in at from 3,500 to 4,000 barrels a day. It is a short distance from the famous Carey well that came in, it is reported, at around 14,000 barrels a day. It is a short distance from the Lauderdale well that came in at about 3,000 barrels a day.

Looks like our lease is right in the heart of big production, doesn't it? You'd like to get quick action on your money? Sure you would, so listen:

We have already let the contract for our first well on our lease. We have our rig up, our tools and necessary materials are on the road to our lease. We will be starting the drill after the liquid gold within a few days. Perhaps within five or six days from now we will be actually drilling.

We have only a limited amount of this stock to offer. We mean business. We will drill this well regardless of stock sales, and when we get the drill going, when another big gusher comes in near us—the value of our stock will increase—the price may be advanced. The time to buy this stock is now while you get in on the ground floor.

You share in all the profits that we make. You share in all the property we own now, or ever will own. You share equally in everything we own or ever will own. You become a real partner with all of us when you get in this company.

Our officers are men of high standing—successful men in their business. They are practical oil men—they have made money out of the oil business.

We organized this company to make big money. It costs money to drill for oil, and the burden of cost is heavy for one person or a few to carry, so we are inviting a few others to join with us in going after oil. Your money joins ours in the quest for oil. You become a real partner of ours in this wonderful enterprise. You have an opportunity right now to get into the oil business, on the ground floor, at small cost, with a chance to make 100 to 1, yes, a thousand dollars for every dollar you invest.

We tell you we will get quick action on your money. We are going after the oil right now. So, you, too, should act quickly. Send in your remittance today. Make your check as large as you possibly can. It may mean big money to you. One good investment may make you more money than you can make in months and months at hard work.

We submit our geologist's report, from Mr. H. H. Adams, who is a recognized authority in the Ranger territory.

The officers of this company are practical oil field men of years' experience.

ADAMS & BUTTERS, PETROLEUM and MINING GEOLOGISTS. Texas and Mexican Geology. Ranger, Texas, 1-20-19.

Mr. J. Cunningham, Denver, Colo. Dear Sir: The acreage under consideration is in the Cisco formation of the Pennsylvanian age. There shows a clearly defined nose or terrace coming into the south. There is no closure, but all the promising acreage in Stephens and Eastland counties are on similar structures. It is well known that on these structures just over the edge of the terrace the production has been surveyed and best. The Terrell, the Fincher No. 2, the Lauderdale, the Butler and, in fact, practically all the better wells are located just over the edge of the terrace down on the normal dips or slopes of the structure. The location on the Buchanan (our lease) is similar to those above mentioned, with relation to structural conditions. There have been no failures so far in Eastland or Stephens Counties where structural conditions were clearly defined and where locations were made near the edge of the terrace as described above. I regard this location as one of the most favorable ones outside of proven territory in Eastland in Stephens County. (Signed) H. H. ADAMS.
